# Course Objective

This program is designed to review treatment options for the fixation of complex distal femur and humeral fractures through case studies, including associated clinical outcomes. The theory of Far Cortical Locking (FCL) with an emphasis on the Zimmer® MotionLoc™ Screw Technology and its role in the evolution of plating will be discussed. Also, clinical applications of bone graft substitutes to aid fracture healing will be discussed, and Actifuse, a bioactive silicate substituted calcium phosphate bone graft substitute will be introduced and examined. The course is designed as product training for the general orthopaedic surgeon and traumatologist.

## Meeting Agenda

- 06:00 PM: Arrival and Registration
- 06:30 PM: Dinner
- 06:45 PM: Featured Presentations by Dr. Peter O'Brien
- 08:00 PM: Actifuse – Presentation by Samantha Webster (Baxter)
- 08:30 PM: Case Discussions and Questions
- 09:00 PM: Adjourn
