## COURSE OVERVIEW

This course is designed to provide participants with an interactive opportunity to learn about and discuss emerging technologies and techniques for treating the young patient, as well as difficult primary and complex revision scenarios in joint arthroplasty. This course is appropriate for community and specialized orthopaedic surgeons who perform hip and knee surgery. The course utilizes breakout sessions with faculty-led lectures, small group discussions and difficult case reviews to enable a better understanding of key strategies for overcoming challenges in early intervention, primary and revision joint arthroplasty. Patient selection, preoperative planning, intraoperative difficulties, and patient follow-up will also be addressed.

## OBJECTIVES

- Explore the current challenges treating the young, high demand patient population.
- Discuss key considerations for planning difficult primary surgical procedures
- Understand current trends in managing hip fracture patients
- Identify potential issues that may arise during revision joint arthroplasty and provide strategic options to address
- Discuss various prostheses and their unique advantages in addressing specific patient indications.
